Glide training: create your mobile applications without coding

2 days (14 hours)

Presentation

Glide is a [no-code](#) application [that lets you](#) quickly develop functional, shareable applications. Thanks to a visual interface, it's possible to create an application from A to Z without any notion of code or technical background. The no-code method saves you development time and makes you more efficient in creating a testable mock-up or usable tool.

This training course is aimed at managers and company directors wishing to develop an internal application for their organization. To improve productivity and streamline team communication, no-code can be used to create tools for your employees.

Glide can also be used by entrepreneurs looking to develop a high-quality, functional product without the need for a developer or agency. Creating a no-code application is around 10 times faster than the traditional method.

In this course, you'll learn how to create your application without coding a single line, and how to share it with users. You'll also learn advanced functions to give different roles to your users and protect their personal data. You'll also have access to the [Glide community, one of the most](#) active no-code communities.

At the end of this training course, you'll have all the keys you need to create and deploy your application to your teams or the general public.

Objectives

- Create your application without code
- Share the application with other users
- Monitor your application
- Protecting user data in compliance with the RGPD

Target audience

- Team managers, Directors
- Project managers
- Contractors

Prerequisites

- No prerequisites required

Our Glide training program

Create your first application

- The Glide interface
- Formatting your database
 - Google Sheet
 - Airtable
 - Excel
- Create your application
- Configuring the Data Editor
- Using screen types
- Layout your application

Layout your application

- Using the detail view
- Using design components
- Designing your application
- Discover the application's Tabs
- Create online libraries (pdf or videos)

Improving the user experience

- Create personal user accounts
- Use forms to add data
- Tailor-made onboarding
- Publish your application
- Application settings

Boost your application

- Discover our actions
- Create buttons to trigger workflows
- Add files
- Understanding the basics of front-end and back-end workflows
- Creating powerful applications with logic

Data and safety

- Define roles for your users
- Protecting users' personal data
- Creating conditions by data
- Delete personal user data
- Filter and display data

Monitor your application

- Use integrations to boost your application

Optional modules (+ 1 day) Advanced

design functions

- Customized domain names
- Create a home menu
- Using advanced functions
- Using APIs
- Inserting components into the application

Share application

- Registration and landing pages
- Registration with signature
- Automatic mailings
- User agreement and legal notice
- Add user interaction
- Host user files on the application

Companies concerned

This training course is aimed at both individuals and companies, large or small, wishing to train their teams in a new advanced computer technology or to

acquire specific business knowledge or modern methods.

Positioning on entry to training

Positioning at the start of training complies with Qualiopi quality criteria. As soon as registration is finalized, the learner receives a self-assessment questionnaire which enables us to assess his or her estimated level of proficiency in different types of technology, as well as his or her expectations and personal objectives for the training to come, within the limits imposed by the selected format. This questionnaire also enables us to anticipate any connection or security difficulties within the company (intra-company or virtual classroom) which could be problematic for the follow-up and smooth running of the training session.

Teaching methods

Practical course: 60% Practical, 40% Theory. Training material distributed in digital format to all participants.

Organization

The course alternates theoretical input from the trainer, supported by examples, with brainstorming sessions and group work.

Validation

At the end of the session, a multiple-choice questionnaire verifies the correct acquisition of skills.

Sanction

A certificate will be issued to each trainee who completes the course.
