## Microsoft Purview training

2 days (14 hours)

### Presentation

Our Microsoft Purview training course offers you a unique opportunity to deepen your knowledge of information protection and data governance within your company.

During this training course, you will develop the skills needed to effectively use [Microsoft Purview](#) to classify, monitor and protect your organization's sensitive data. You'll learn how to detect confidential information leaks, assess data security risks and ensure compliance with current regulations.

This course will also prepare you to meet the growing challenges of information security by familiarizing you with best practices in data security and risk management.

We focus on mastering the advanced features of Microsoft Purview to ensure optimum protection of your business-critical information.

### Objectives

- Gain an in-depth understanding of Microsoft Purview's classification and data protection features
- Detect and respond to security incidents involving sensitive data
- Implement advanced security strategies to prevent internal and external threats
- Efficiently manage compliance with information protection standards
- Use analysis and reporting tools to assess compliance and the effectiveness of data protection measures

### Target audience

- IT security managers
- Network administrators
- Compliance and data governance analysts

## Prerequisites

Basic knowledge of sensitive data management and IT security principles.

- Development of customized solutions using Purview's advanced features
- Discussion of challenges encountered and best practices recommended

## Companies concerned

This course is aimed at both individuals and companies, large or small, wishing to train their teams in a new advanced computer technology, or to acquire specific business knowledge or modern methods.

## Positioning on entry to training

Positioning at the start of training complies with Qualiopi quality criteria. As soon as registration is finalized, the learner receives a self-assessment questionnaire enabling us to assess his or her estimated level of proficiency in different types of technology, as well as his or her expectations and personal objectives with regard to the training to come, within the limits imposed by the selected format. This questionnaire also enables us to anticipate any connection or security difficulties within the company (intra-company or virtual classroom) which could be problematic for the follow-up and smooth running of the training session.

## Teaching methods

Practical course: 60% Practical, 40% Theory. Training material distributed in digital format to all participants.

## Organization

The course alternates theoretical input from the trainer, supported by examples, with brainstorming sessions and group work.

## Validation

At the end of the session, a multiple-choice questionnaire is used to check correct acquisition.

skills.

## Sanction

A certificate will be issued to each trainee who completes the course.
