

Odoo V18 training

3 days (21 hours)

Presentation

Odoo is an open source software company offering a complete suite of fully integrated business management modules. It is currently used by over 2 million users.

Odoo is a business management program which, thanks to its applications, meets a wide range of business needs, from customer relationship management to the creation of websites and e-commerce, via production, inventory management, accounting, ERP and more.

The advantage of this program is that all tasks can be grouped together in a single environment and interchanged with each other. In this way, data from one domain can be transmitted to another.

Odoo can be used by companies of all sizes and in all sectors. It facilitates repetitive tasks to a large extent, using automated and customizable structures.

As with all our training courses, this one will introduce you to the latest version of [Odoo v18](#).

- Unit tests
- Automated actions
- PDF reports : Qweb
- Email templating: Jinga2
- Dashboards
- WebServices

Deployment in production environment

- Preparing the production server
- Installation and deployment
- A minimum of safety
- Activate multi-threading mode
- Administration and maintenance

Companies concerned

This course is aimed at both individuals and companies, large or small, wishing to train their teams in a new advanced computer technology, or to acquire specific business knowledge or modern methods.

Positioning on entry to training

Positioning at the start of training complies with Qualiopi quality criteria. As soon as registration is finalized, the learner receives a self-assessment questionnaire which enables us to assess his or her estimated level of proficiency in different types of technology, as well as his or her expectations and personal objectives for the training to come, within the limits imposed by the selected format. This questionnaire also enables us to anticipate any connection or security difficulties within the company (intra-company or virtual classroom) which could be problematic for the follow-up and smooth running of the training session.

Teaching methods

Practical training: 60% Practical, 40% Theory. Training material distributed in

to all participants.

Organization

The course alternates theoretical input from the trainer, supported by examples, brainstorming sessions and group work.

Validation

At the end of the session, a multiple-choice questionnaire verifies the correct acquisition of skills.

Sanction

A certificate will be issued to each trainee who completes the course.
